^{*} Types SVO, SVTO, SJO, SJTO, SO, HSJO and HSO have jackets which are also recognized for oil resistance at 60°C and lower temperatures.

Types SJ, SJO, SJT, SJTO, S, SO, ST, and STO may be made with water-resistant insulation with "WATER RESISTANT" printed on the jacket.

Types SJ, SJO, SJT, SJTO, S, SO, ST, STO, SPT-1 and SPT-2 may be made for outdoor use, with "W-A" printed on the jacket after the Type designation (example): TYPE SJTW-A).

Types TPT, SPT-1, SPT-2, SPT-3, HPN, SVO, SJO, SJT, SJTO, SO, ST AND STO (the parallel conductor types are limited to two-conductor contruction) may be made in retractile form.

Types SV, SVO, SVT, SVTO, SJ, SJO, SJT, SJTO, S, SO, ST and STO may be made with foil service, or braid shields under the jacket and are printed "SHIELDED".

Types SJT, in 3 conductors may be made in special low leakage contructions for medical applicaions.

^{**} Temperatures ratings higher than 60°C are printed on jacket except for heater cordage Type HPN 90°C or 105°C. HSJ, HSJO, HS and HSO heater cordage is rated 90°C r core only, while temperature printed on outside applies to jacket only.

⁺ Also recognized by Underwriters' Labortories, Inc. in three contuctors when the third conductor (with green insulation) is used for appliance or equipment grounding.

⁺⁺ Insulation and jacket thickness depend on cord size. Thicknesses shown are for 18 and 16 AWG.

⁺⁺⁺ HPN may use CPE (Chlorosulfonated polyethylene) to enhance color stability.

Note SRD or SRDT—3 - conductor version can be made in braidless parallel contrction with .110" nominal insulation.
